

Technical Guidelines on Retro-commissioning and Pilot Projects

Buildings consume **90%** of the City Electricity

Existing Buildings in Hong Kong

Age	Number of Buildings	Percentage
<10	5814	14%
10-19	8569	20.6%
20-29	11148	26.7%
30-39	6688	16.1%
40-49	5712	13.7%
>50	3690	8.9%
Total	41621	100%

Source: Buildings Department (as at 31.12.2009)

More can be done on Existing Buildings

- **Green housekeeping;**
- **Retrofitting with energy efficiency equipment;**
- **Retro commissioning**

What is Retro-commissioning ?

Retro-commissioning is...

- A cost-effective systematic process to periodically check an existing building's performance.
- The process identifies operational improvements that can effectively save energy and thus lower energy bill
- The process can be performed alone or with a retrofit project

Buildings often get out of tune...

- Changes induced by addition, alterations and improvement works
- Drift off control set points
- Drop in accuracy or sensitivity of sensors and sub-optimal maintenance

- Outdated control system
- Unsatisfactory performance of building
- Unnecessary energy losses

We completed **Energy Audit** already!

Why retro-commissioning ?

What is the difference between an energy audit and retro-commissioning (RCx)?

- RCx focuses on O&M type opportunities, not capital projects like equipment replacement
- RCx may involve corrective actions/quick fix during the investigation
- RCx pushes towards an on-going commissioning effort and engages the owners staff

Key Initiatives - Retro-commissioning

- EMSD takes a leading role to develop the Technical Guidelines [TG(RCx)]
- 6 existing government buildings are selected as Pilot study for application of the draft TG(RCx).

6. Framework of draft TG(RCx)

Stage 1: Planning

Stage 2: Investigation

Stage 3: Implementation

Stage 4: On-going commissioning

The Benefits

Improve building performance

Improve occupant comfort and productivity

Improved building systems efficiency and extended equipment useful life

Improve system reliability

Reduce maintenance cost

Provide appropriate training to O&M staff

No or Low cost - short payback

Review of Technical Guidelines on Retro-commissioning

- The pilot studies are still in progress and targeted to be completed by mid 2017.
- The feedback and experience gained from both consultation and pilot projects will be used to fine-tune the draft TG(RCx)
- Revised draft consultation in 2107Q2
- The guidelines targeted to be finalized and launch in **mid 2017.**

THANK
YOU
